

AST → Javascript

Solution

- Function constructor
- `let fn = new Function(arg1, arg2, functionBody)`

```
const func = Function(Object.keys(variables), functionString)
const result = func(Object.values(variables ?? {}))
```

The background consists of several overlapping, wavy, dark gray shapes that create a sense of depth and movement. The shapes are layered, with some appearing more prominent than others, and they span the entire width of the image.
